The Philosophy

In 1985, as a foundational principle 'Networking the future with dream and pride', Daccable was established after demerged from the cable television station. We are proud of our many achievements as consulting that help startup the cable stations focusing on Western Japan. Since we have the construction department, we have got client's trust as the company which can be able to respond to the cable station's request with One-stop service.

Especially, we specializes high-difficulty jobs like prime constructing of building moves which is in the operating. Moreover, we propose business management strategies by considering condition of each cable station. The cable stations where we have consulted, are practically small scale in region, but their managing condition is quite good.
